(54) Title: COMPOSITIONS AND METHOD FOR ENHANCED MUCOSAL DELIVERY OF INTERFERON BETA

(57) Abstract: Compositions and methods are provided for intranasal delivery of interferon- β yielding improved pharmacokinetic and pharmacodynamic results. In certain aspects of the invention, the interferon- β is delivered to the intranasal mucosa along with one or more intranasal delivery-enhancing agent(s) to yield substantially increased absorption and/or bioavailability of the interferon- β and/or a substantially decreased time to maximal concentration of interferon- β in a tissue of a subject as compared to controls where the interferon- β is administered to the same intranasal site alone or formulated according to previously disclosed reports. The enhancement of intranasal delivery of interferon- β according to the methods and compositions of the present invention allows for the effective pharmaceutical use of these agents to treat a variety of diseases and conditions in mammalian subjects.
